| 7. | Aangegeven prestatie(s): | | | |
| | **Mechanische weerstand en stabiliteit (BWR 1)** | | | |
| | Kenmerkende weerstand tegen trekbelasting (statische en quasi-statische belasting): | Weerstand tegen staalbreuk: | Bijlages C1- C3 | |
| | | Weerstand tegen gecombineerd uittrekken en betonnen kegelbreuk: | Bijlages C4- C8 | $\tau_{Rk,100}$= NPD |
| | | Weerstand tegen betonnen kegelbreuk: | Bijlages C4 | |
| | | Randafstand om spleetbreuk onder belasting te voorkomen: | Bijlages C4 | |
| | | Robuustheid | Bijlage C4-C8, C13, | |
| | | Maximaal montagekoppel: | Bijlages B4- B6 | |
| | | Minimale rand- en hartafstand: | Bijlages B4- B6 | |
| | Kenmerkende weerstand tegen schuifbelasting (statische en quasi-statische belasting): | Weerstand tegen staalbreuk: | Bijlages C1- C3 | |
| | | Weerstand tegen uitbreken (pryout): | Bijlage C4 | |
| | | Weerstand tegen bezwijken van betonranden: | Bijlage C4 | |
| | Kenmerkende weerstand en verplaatsingen voor de seismische prestatiecategorieën C1 en C2: | Trekkrachtweerstand, verplaatsingen categorie C1: | Bijlages C11, C13 | |
| | | Trekkrachtweerstand, verplaatsingen categorie C2: | Bijlages C11, C14 | |
| | | Weerstands afschuifbelasting, verplaatsingen categorie C1: | Bijlage C11 | |
| | | Weerstands afschuifbelasting, verplaatsingen categorie C2: | Bijlages C11, C14 | |
| | | Factor ringvormige opening: | Bijlage C11 | |
| | Verplaatsingen onder korte- en langetermijnbelading: | Verplaatsingen onder korte- en langetermijnbelading: | Bijlages C9, C10 | |
| | **Hygiëne, gezondheid en milieu (BWR 3)** | | | |
| | Content, emission and/or release of dangerous substances: | NPA | | |

8. Geëigende technische documentatie en/of specifieke technische documentatie: –

De prestaties van het hierboven omschreven product zijn conform de aangegeven prestaties. Deze prestatieverklaring wordt in overeenstemming met Verordening (EU) nr. 305/2011 onder de exclusieve verantwoordelijkheid van de hierboven vermelde fabrikant verstrekt.

Ondertekend voor en namens de fabrikant door:

Thilo Pregartner, Dr.-Ing.

Peter Schillinger, Dipl.-Ing.

Tumlingen, 2020-05-27

Deze DoP is opgesteld in meerdere talen. In het geval van geschillen over de interpretatie zal de Engelse tekst altijd prevaleren.

Het aanhangsel bevat vrijwillige en aanvullende informatie in het Engels die de (taal-neutraal gespecificeerde) wettelijke vereisten overschrijdt.

**Specific Part**

## 1 Technical description of the product

The "fischer injection system FIS V" is a bonded fastener consisting of a cartridge with injection mortar fischer FIS V, fischer FIS VW High Speed or fischer FIS VS Low Speed and a steel element according to Annex A5.

The steel element is placed into a drilled hole filled with injection mortar and is anchored via the bond between metal part, injection mortar and concrete.

The product description is given in Annex A.

## 2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

## 3 Performance of the product and references to the methods used for its assessment

### 3.1 Mechanical resistance and stability (BWR 1)

| Essential characteristic | Performance |
|---|---|
| Characteristic resistance to tension load (static and quasi-static loading) | See Annex B 3 to B 6, C 1 to C 8 |
| Characteristic resistance to shear load (static and quasi-static loading) | See Annex C 1 to C 4 |
| Displacements under short-term and long-term loading | See Annex C 9 and C 10 |
| Characteristic resistance and displacements for seismic performance categories C1 and C2 | See Annex C 11 to C 14 |

### 3.2 Hygiene, health and the environment (BWR 3)

| Essential characteristic | Performance |
|---|---|
| Content, emission and/or release of dangerous substances | No performance assessed |

## 4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

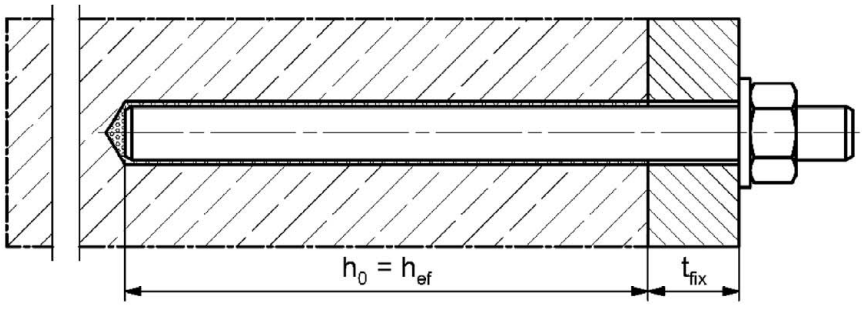
In accordance with the European Assessment Document EAD 330499-01-0601 the applicable European legal act is: [96/582/EC].

The system to be applied is: 1

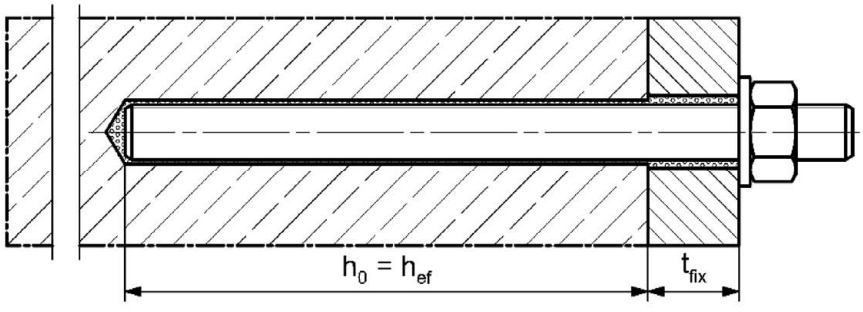
## Installation conditions part 1

**fischer anchor rod**

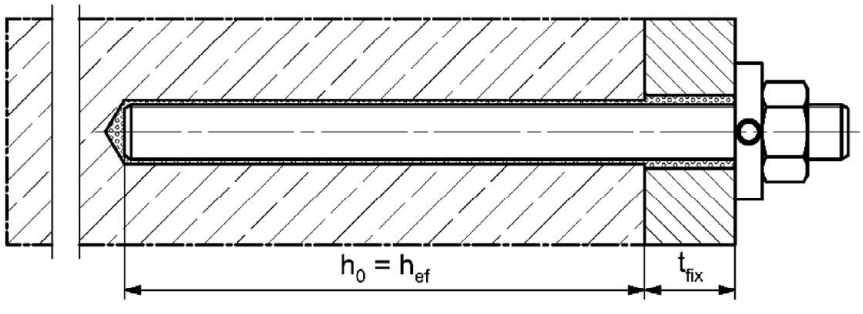
**Pre-positioned installation**



**Push through installation** (annular gap filled with mortar)



**Pre-positioned or push through installation with subsequently injected fischer filling disc** (annular gap filled with mortar)



Figures not to scale

$h_0$ = drill hole depth

$h_{ef}$ = effective embedment depth

$t_{fix}$ = thickness of fixture

[1] Not for FIS VW High Speed and FIS VS Low Speed
[2] No performance assessed

## Specifications of intended use (part 2)

**Base materials:**

- Compacted reinforced or unreinforced normal weight concrete without fibres of strength classes C20/25 to C50/60 according to EN 206:2013+A1:2016

**Use conditions (Environmental conditions):**

- Structures subject to dry internal conditions
  (zinc coated steel, stainless steel or high corrosion resistant steel).
- For all other conditions according to EN1993-1-4:2015 corresponding to corrosion resistance classes to Annex A 6 table A6.1.

**Design:**

- Anchorages have to be designed by a responsible engineer with experience of concrete anchor design.
- Verifiable calculation notes and drawings are to be prepared taking account of the loads to be anchored. The position of the anchor is indicated on the design drawings (e. g. position of the anchor relative to reinforcement or to supports, etc.).
- Anchorages are designed in accordance with:
  EN 1992-4:2018 and EOTA Technical Report TR 055, Edition February 2018.

**Installation:**

- Anchor installation is to be carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site
- In case of aborted hole: The hole shall be filled with mortar
- Anchorage depth should be marked and adhered to on installation
- Overhead installation is allowed

**Table B3.1:** Installation parameters for **anchor rods**

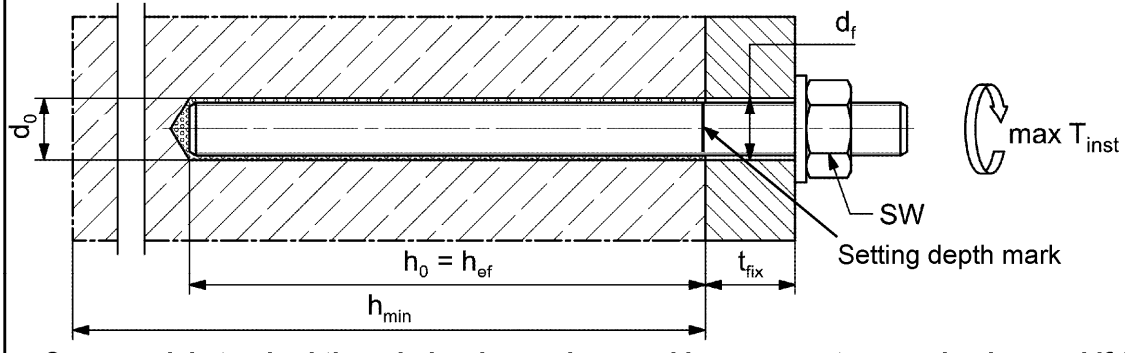
| Stainless steel R property class 80 | * | | |

Alternatively: Colour coding according to DIN 976-1: 2016

[1] PC = property class

**Installation conditions:**



**Commercial standard threaded rods, washers and hexagon nuts may also be used if the following requirements are fulfilled**

- Materials, dimensions and mechanical properties according to Annex A 6, Table A6.1
- Inspection certificate 3.1 according to EN 10204:2004, the documents have to be stored
- Setting depth is marked

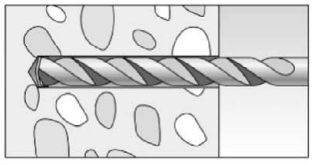
| > 30 to 40 | - | 2 min | 4 min | - | 35 min | 30 min |

[1] In wet concrete or water filled holes the curing times must be doubled
[2] Minimal cartridge temperature +5°C

## Installation instructions part 1

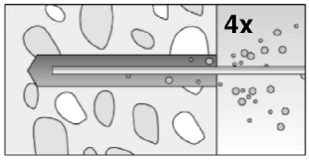
### Drilling and cleaning the hole (hammer drilling with standard drill bit)

**1**

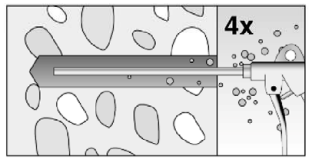


Drill the hole.
Nominal drill hole diameter $\mathbf{d_0}$ and drill hole depth $\mathbf{h_0}$
see **tables B3.1, B4.1, B5.1, B6.1**

**2**

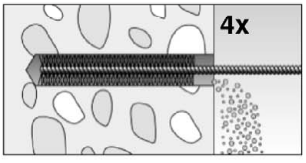


Clean the drill hole:
For $h_{ef} \leq 12d$ and
$d_0 < 18$ mm
blow out the hole four times by hand



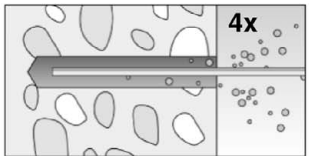
For $h_{ef} > 12d$ and / or
$d_0 \geq 18$ mm blow out the hole four times with oil-free compressed air
($p \geq 6$ bar)

**3**

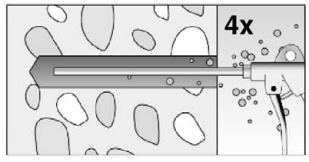


Brush the drill hole four times. For deep holes use an extension.
Corresponding brushes see **table B7.1**

**4**



Clean the drill hole:
For $h_{ef} \leq 12d$ and
$d_0 < 18$ mm
blow out the hole four times by hand



For $h_{ef} > 12d$ and / or
$d_0 \geq 18$ mm blow out the hole four times with oil-free compressed air
($p \geq 6$ bar)

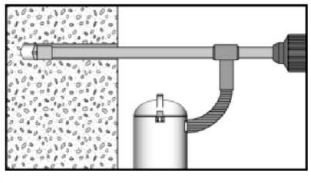
Go to step 5

### Drilling and cleaning the hole (hammer drilling with hollow drill bit)

**1**

Check a suitable hollow drill (see **table B1.1**)
for correct operation of the dust extraction

**2**



Use a suitable dust extraction system, e. g.
fischer FVC 35 M or a comparable dust extraction system
with equivalent performance data

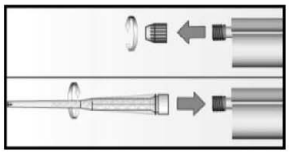
Drill the hole with hollow drill bit. The dust extraction system has to extract the drill dust nonstop during the drilling process and must be adjusted to maximum power. Nominal drill hole diameter $\mathbf{d_0}$ and drill hole depth $\mathbf{h_0}$
see **tables B3.1, B4.1, B5.1, B6.1**

Go to step 5

## Installation instructions part 2

### Preparing the cartridge

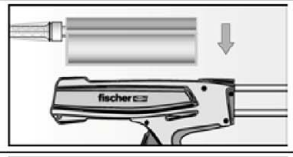
**5**

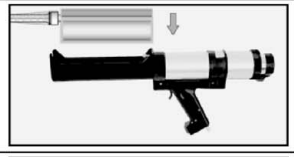


Remove the sealing cap

Screw on the static mixer
(the spiral in the static mixer must be clearly visible)

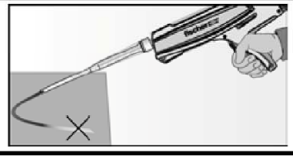
**6**

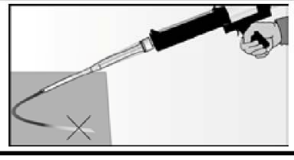




Place the cartridge into the dispenser

**7**



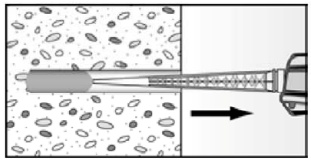


Extrude approximately 10 cm of material out until the resin is evenly grey in colour. Do not use mortar that is not uniformly grey

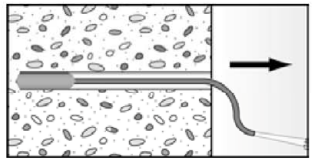
Go to step 8

### Injection of the mortar

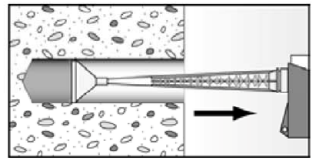
**8**



Fill approximately 2/3 of the drill hole with mortar. Always begin from the bottom of the hole and avoid bubbles



For drill hole depth ≥ 150 mm use an extension tube



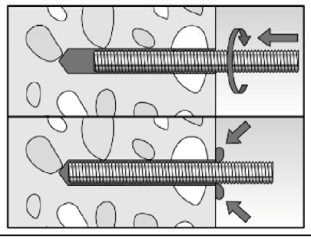
For overhead installation, deep holes ($h_0$ > 250 mm) or drill hole diameter ($d_0$ ≥ 40 mm) use an injection adapter

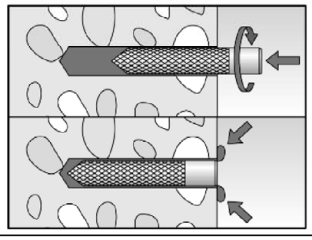
Go to step 9

## Installation instructions part 3

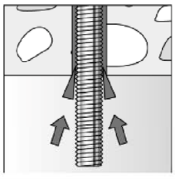
Installation of anchor rods or fischer internal threaded anchors RG MI

**9**

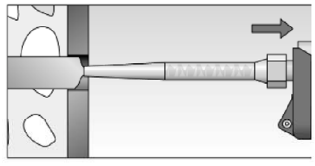




Only use clean and oil-free metal parts.
Mark the setting depth of the metal part. Push the anchor rod or fischer internal threaded RG MI anchor down to the bottom of the hole, turning it slightly while doing so.
After inserting the metal parts, excess mortar must be emerged around the anchor element.



For overhead installations support the metal part with wedges (e. g. fischer centering wedges) or fischer overhead clips.

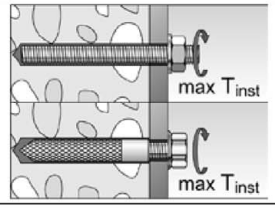


For push through installation fill the annular gap with mortar

**10**

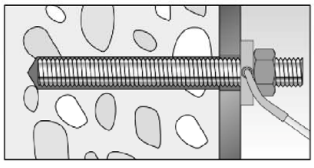
Wait for the specified curing time $t_{cure}$
see **table B7.2**

**11**



Mounting the fixture
max $T_{inst}$ see **tables B3.1 and B4.1**

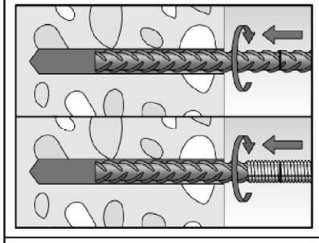
**Option**



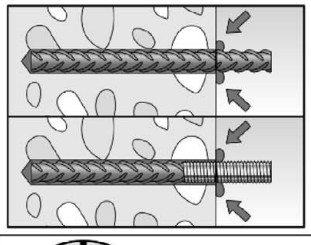
After the minimum curing time is reached, the gap between metal part and fixture (annular clearance) may be filled with mortar via the fischer filling disc. Compressive strength ≥ 50 N/mm² (e.g. fischer injection mortars FIS HB, FIS SB, FIS V, FIS EM Plus). ATTENTION: Using fischer filling disc reduces $t_{fix}$ (usable length of the anchor)

Installation reinforcing bars and fischer rebar anchor FRA

**9**

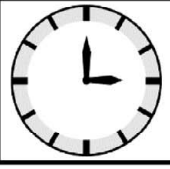


Only use clean and oil-free reinforcing bars or fischer FRA. Mark the setting depth. Turn while using force to push the reinforcement bar or the fischer FRA into the filled hole up to the setting depth mark



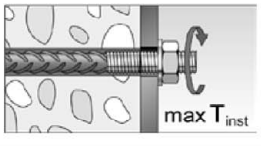
When the setting depth mark is reached, excess mortar must be emerged from the mouth of the drill hole.

**10**



Wait for the specified curing time $t_{cure}$ see **table B7.2**

**11**



Mounting the fixture
max $T_{inst}$
see **table B6.1**

fischer injection system FIS V

**Intended use**
Installation instructions part 3
